MEMORANDUM FOR: [redacted]
Acting Director, Intelligence Community Staff

FROM: [redacted]
Director, Office of Community Coordination

SUBJECT: OCC ADP Requirements

25X1

25X1

1. We have completed an ADP requirements survey of OCC subelements with extremely interesting results. Whereas requirements to support purely internal operating needs are minor, there are a significant number of needs that relate to responsibilities and services performed by OCC on behalf of the Community or in a coordinating role. Collectively, these translate to maintenance of certain common interest data bases in an automated system providing interactive access to Community members, as well as facilities for rapid coordination and dissemination of data currently produced as hard copy correspondence.

2. [redacted] effectively summarizes and illustrates these needs in the accompanying memorandum. [redacted] memo to you of 29 January provides additional support. I understand also that a principal OPBC interest is development of an automated capability to interact with Community program managers in operating the forthcoming target oriented programming and budgeting system. OCC's requirements of this type include:

25X1

25X1

- Distribution of and archival access to NFIB/NFIC documents;
- DCID 1/2 priorities data base and changes thereto, and
- Congressional testimony, questions and reports.

3. I suggest that the basic question as to whether we are going to aim for a purely in-house ADP capability or the broader system implied above needs to be addressed early, since the answer will fundamentally influence all subsequent action. OCC is prepared to participate in this endeavor at your election and convenience.
